AZUSA PACIFIC UNIVERSITY

Detection to documentation

Using “Revision History” tool to support authentic writing through process-based assessment

AACN Transform 2026 | Friday, Dec. 4 | 9:25–9:45 a.m. | JW Grand Ballroom 6

Sharon K. Titus, PhD, MSN, RN, CNE
Professor, College of Nursing & Health Sciences
stitus@apu.edu

Brianna M. Pack, MPH, MBA
Assistant Professor, College of Nursing & Health Sciences

Session resources

Videos, SHOW steps, assignment language

Detection alone falls short

1 in 4

students use AI for papers

EDUCAUSE, 2026

50%

worry AI erodes their thinking

EDUCAUSE, 2026

61%

of non-native English writers' essays flagged as AI

Liang et al., 2023

Detection guesses from the product. Documentation shows the process.

Neurodivergent students: higher risk too (Eaton, 2025)

From detection to documentation

In nursing, if it wasn't documented, it wasn't done

Detection

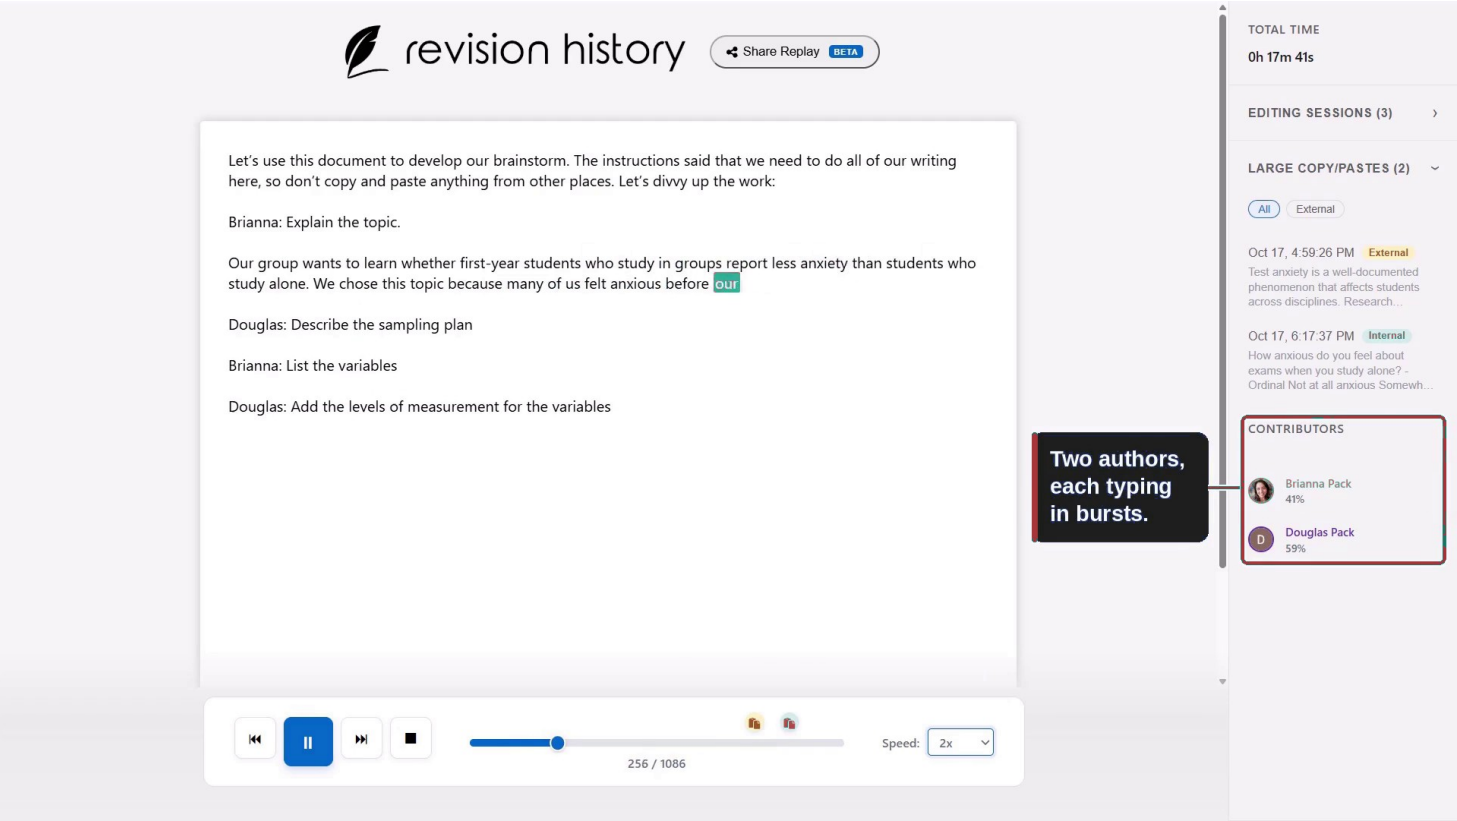

- Judges the product
- Guesses; can be biased
- After submission
- Starts with suspicion

Documentation

- Shows the process
- Visible evidence
- While students write
- Starts a conversation

The tool: Revision History

Free Chrome extension for Google Docs history

Replay of a shared Google Doc

What it shows

Writing time, pastes, authorship, replay

What it isn't

An AI detector. It makes no judgment.

Explore it on your phone

Scan for a live demo document

Before SHOW: a typical writing assignment

Teaching statement

Write a 2–3 page statement describing your approach to patient and family teaching.

Use APA format.

Upload your Word document or PDF to Canvas by Wednesday at 11:59 p.m.

Example for illustration

What this can't tell you

- Who wrote it
- Built over time, or all at once?
- Where they got stuck
- What feedback changed

Make your students SHOW their work

Four steps to redesign any writing assignment around the process

S **Structure the assignment**
Milestones in one shared Google Doc. You're an editor, and students submit the link.

H **Hold students accountable**
At the first milestone, check for pasting and who isn't taking part.

O **Observe and respond**
Give formative feedback at each milestone. Students revise in the same Doc.

W **Weigh the whole picture**
Grade development, revision and participation, not only the final product.

Writing course: a teaching statement

Instructions: How to Submit (follow these steps in order)

1. **Create a new Google Doc.** Title it *LastName_FirstName_Teaching Statement*.
2. **Share it with your faculty as Editor.** Click the blue "**Share**" button (top right), enter [faculty email address(es)], change the role from "Viewer" to **Editor**, and click **Send**. Viewer or Commenter access will prevent grading and will be treated as a missed submission.
3. **Submit the URL in Canvas by Wednesday.** Open the assignment in Canvas and paste the link into the text-entry box. Confirm that the link works by opening it in an incognito or private browser window, or ask a classmate to test it.
4. **Write your statement directly in the Google Doc.** Do all drafting, revising, and analysis in this document from start to finish.

Important submission rules

- **Do not** download your document as a Word file or PDF and upload it to Canvas. Only the shared Google Doc link will be accepted.
- Your instructor will grade directly in your Google Doc and review the **revision history** to confirm authorship.
- **Large copied/pasted or imported content will receive a grade of 0.** This includes text pasted from another document, website, or AI tool.
- Do not change sharing permissions or edit the document after the deadline unless instructed.

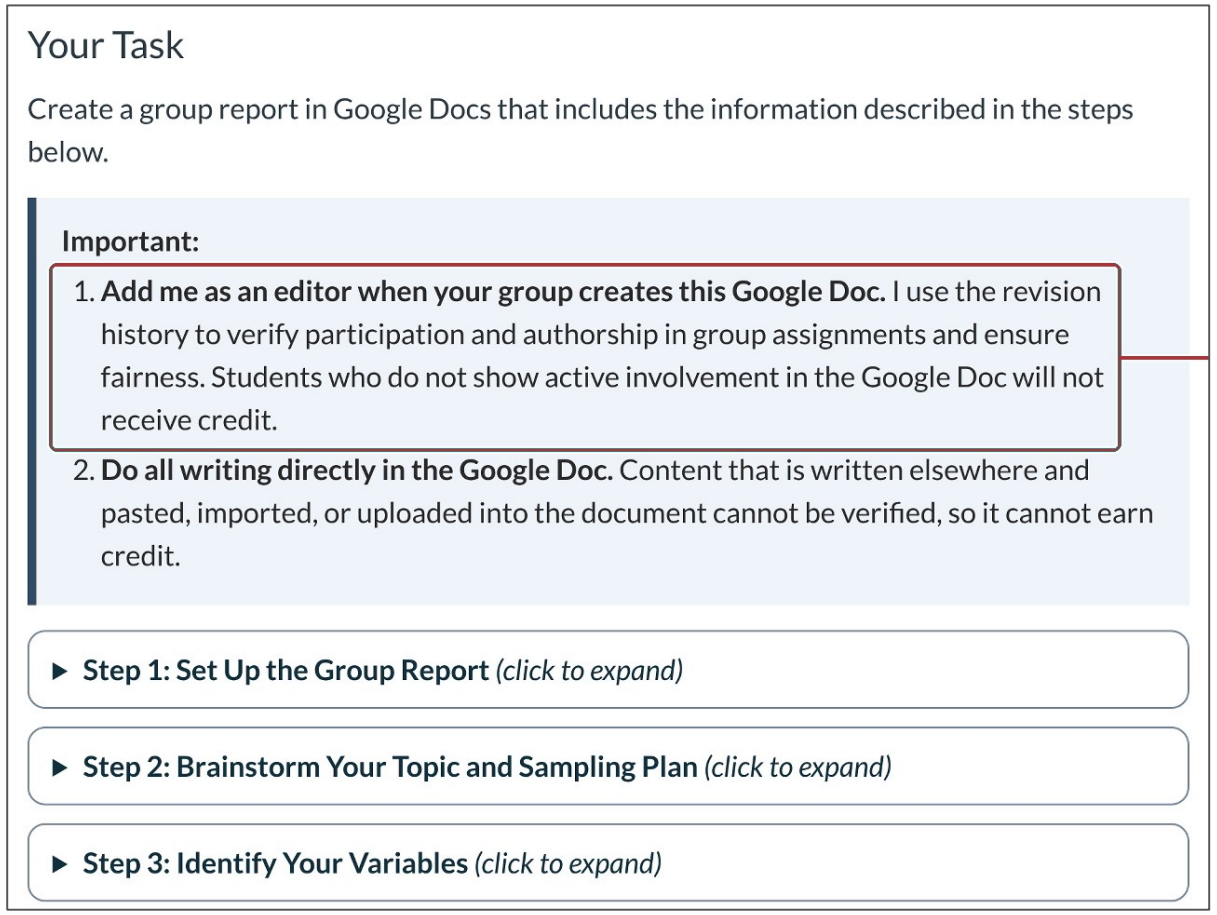

S One shared Doc, faculty as Editor

O Feedback and grading in the Doc

H Large pastes earn a zero

W Revision history confirms authorship

Group project: an applied data course

Your Task

Create a group report in Google Docs that includes the information described in the steps below.

Important:

1. **Add me as an editor when your group creates this Google Doc.** I use the revision history to verify participation and authorship in group assignments and ensure fairness. Students who do not show active involvement in the Google Doc will not receive credit.
2. **Do all writing directly in the Google Doc.** Content that is written elsewhere and pasted, imported, or uploaded into the document cannot be verified, so it cannot earn credit.

▶ **Step 1: Set Up the Group Report** *(click to expand)*

▶ **Step 2: Brainstorm Your Topic and Sampling Plan** *(click to expand)*

▶ **Step 3: Identify Your Variables** *(click to expand)*

Undergraduate nursing statistics: real-world data

S One report, built in milestones in one Doc

H No pasting, and everyone contributes

O Feedback, then revision in the Doc

W Credit for each member's part

After pastes were flagged on assignment 1, only **2 of 62** pasted on assignment 2 · participation up

Same SHOW, different courses

		Writing: teaching statement	Group: applied data project
S	**Structure**	Drafts in one Doc	Milestones in one group Doc
H	**Hold**	Large pastes earn a zero	Group contributions are transparent
O	**Observe**	Faculty feedback, then revision	Faculty and peer feedback, then revision
W	**Weigh**	History confirms authorship and growth	Credit learner participation

Applies across teaching modalities

Limitations

Pasting from elsewhere

Drafting elsewhere hides authorship

What helps:

Ask; set expectations early

Internet access

Needs reliable internet

What helps:

Offline options, flexible milestones

Institutional infrastructure

Not every program has Google Workspace

What helps:

SHOW works with any version history

Implications for nursing education

> “The future of teaching is not about replacing instructors with AI but about empowering them with AI tools to become more effective, efficient, and impactful educators.
>
> **Schmitz & Laird, 2025, EDUCAUSE Review**

Embracing technology

Document learning, don’t police it

Building connections

Writing as a shared process

Practice-ready graduates

Documentation and accountability: nursing habits

AACN Essentials: Domain 8, Informatics and Healthcare Technologies · Domain 9, Professionalism

Your turn

Think of one assignment where you could not verify that the writing was the student's own.

How can you implement SHOW to engage learners in a process-based approach?

Take it home

How-to videos and copy-ready assignment language

AI use disclosure

Portions of the abstract's background and recommendations were edited using Claude Sonnet v5 and Gemini (v3.6) for language refinement.

Claude (Anthropic) assisted with drafting slide text, speaker notes and layout, and with editing the session site and videos. The presenters reviewed and verified all content and citations.

Revision History is a third-party tool. The presenters have no affiliation with it and no conflicts of interest to disclose.

Screenshots and video use demonstration documents and assignment instructions. No student information is shown.
